CASE HISTORY ~ CH0242

LEAK SEALING & REHABILITATION OF UNDERGROUND CLOSED DRAIN LINE (POINT 2)

THE CHALLENGE: Currently, a circular leak defect was found on their DN50 (2") underground drain line at 2160, P5. Therefore, they need information on the available repair system that can seal the leak and rehabilitate the defect area to its design pressure and temperature. Listed below are the details of the job done:

Defect Type	: Circular Leak	
Pipe OD	: DN50 (2")	
Design Temperature	: 200°C	
Operating Temperature	: 38°	
Design Pressure	: 7 Bar	
Operating Pressure	: 0.2 Bar	
Medium	: Hydrocarbon (Benze, H2S & Other)	

Figure 1.0: Initial condition of 2" pipe

THE SOLUTION: Corroserv (M) Sdn Bhd proposed composite wet layup system using CRBX600 saturated with Corro-Heat 206 as the composite system to solve this problem. The resin possesses high temperature and chemical resistance properties. The system was applied online with surface preparation according to SSPC-SP11 standards using non-sparking safety tools. Details of the applied system are as follow:

Surface	: SSPC-SP11 (Power Tool Cleaning to	
Preparation	Bare Metal)	
Infill &	Commo DanTM 450	
Rebuilding	: Corro-Dur TM 450	
Interface	: Corro-Heat 206	
Composite	: CRBX600 + Corro-Heat 206	
System	(0.5mm/layer) (10 layers)	
Top Coat	: Corro-Heat 206
