CASE HISTORY ~ CH0170

RISER MAINTENANCE FOR PCSB (COATING)

THE CHALLENGE: Client required for coating application to be **applied online without a shutdown** for their Bend Line, Riser, Riser Pipeline Below ABV Service Deck and also Location of ABV. They required a coating product that can be able to withstand the **cyclic temperature loading** at any time, at the same time possessing good chemical resistance

THE SOLUTION: Corroserv (M) Sdn Bhd has proposed to use Corro-Chem™ 330 HHA as the solution to the needs of client as it fulfils all their needs (cyclic temperature and chemical resistance). The system was applied upon dry blasting as the surface preparation (Dry blasting was performed at 100 psi).

APPLIED SYSTEM:
LINING

YEAR:
2016

LOCATION:
SARAWAK
