CASE HISTORY ~ CH0011

REHABILITATION OF REFINERIES PIPELINES

THE CHALLENGE: A long stretch of oil and gas pipelines needed maintenance specially those areas that exhibit crevice corrosion. They need a product that will permanently protect the pipelines from further deterioration and can be applied at any weather condition. The different divisions who will carry out the repair works have to finish it before the end of the year 2001.

THE SOLUTION: A test was conducted for different pipeline rehabilitation system to determine which product is best suited for their requirement. Corro Wrap in conjunction with Corro Fix 911 / Corro Dur 561 was applied and passed the test conducted by their engineer. The product is very easy to use and can be applied even at the bends. Normally it can be applied in a few minutes and put it into service after a few hours.

THE RESULT: The contractors and engineers who witnessed the demonstration / testing of the product is very impressed and initial repair works of pipelines showed that production rate is quite fast compared to the other product that was used previously. The client realizes a big savings on their repair works since less manpower is required, fast production rate, less downtime and the price of product is reasonable.

APPLIED SYSTEM:
CORRO WRAP WET LAY-UP

YEAR:
2001

LOCATION:
TAIPEI, TAIWAN

NO SEA TOO DEEP, NO JOB TOO TOUGH!
